Since 1984, **Carlo Baumschlager and Dieter Eberle** (<http://www.baumschlager-eberle.com/default.asp>) have been the principles of one of Austria's most successful architecture practices. With offices in Lochau, Vaduz and Vienna, Baumschlager-Eberle have completed more than 350 buildings. They are the pre-eminent member of the Voralberger Baukuenstler, a group of forward thinking architects from Voralberg, whose hallmark is a high sense of social responsibility. Primary Baumschlager-Eberle concerns are energy-conscious construction methods, contained construction costs and good design. Both Carlo Baumschlager and Dietmar Eberle have just been elected Honorary Fellows of the American Institute of Architecture. From [dezeen.com](http://www.dezeen.com) (<http://www.dezeen.com>): Architects Baumschlager Eberle have designed a combined clubhouse and boathouse at Port Rohner on Lake Constance in Fussach, Austria. The cube-shaped building consists of an irregular concrete structure enveloped in glass. *'The irregular structure of the concrete elements is set off against the regular rectangular shapes of the sheets of glass,'* say the architects. *'The randomness of the glass decoration avoids too sharp a contrast between the core and the envelope.'* For more pictures and information visit: www.dezeen.com (<http://www.dezeen.com/2008/12/07/nordwesthaus-by-baumschlager-eberle/#more-21702>)
